

Xotten — Owner Checklist

Generated 2025-08-27 09:06

How the site is wired

- GitHub (repo: xotten.com): stores your site files. Your F:\Xotten.com folder is just a working copy.
- Netlify: hosts the built site and auto-deploys every time you push to GitHub.
- Zoho Domains: you own xotten.com here. DNS points the domain to Netlify.
- Cloudinary: stores images. art.json holds the https links to those images.

Update the site (routine)

1) Edit F:\Xotten.com\public\art.json

- Add artwork: paste a new object with title/year/size/price/sold/image.
- Mark sold: set "sold": true (visible only in Owner mode on the site).
- Edit title/price/etc.: change the fields directly.

2) (Optional) Edit text/layout in src\App.jsx (About, labels) or index.html (SEO).

3) Publish: run the publish.ps1 script (or the Git one-liner).

One-click publish

PowerShell one-liner (manual):

```
cd "F:\Xotten.com"; git add -A; git commit -m "Update site"; git push
```

Included script: publish.ps1

- Double-click or run with PowerShell:
. \publish.ps1 -RepoPath "F:\Xotten.com" -Message "Update site"
- If Message is omitted, it uses a timestamp.

Start local preview:

```
npm run dev
```

Then open <http://localhost:5173/>

Quick health checks

- Live data: <https://xotten.com/art.json> (should show your artworks)
- Gallery cache-buster: <https://xotten.com/?v=update> (Ctrl+F5 once)

JSON templates

Add a new artwork (paste before the last] of art.json, with a leading comma):

```
,  
{  
  "id": "art-999",  
  "title": "Title",  
  "year": 2025,  
  "media": "Oil on canvas",  
  "size": "80x60 cm",  
  "price": "EUR 1200",  
  "sold": false,  
  "image": "https://res.cloudinary.com/.../your_image.jpg",  
  "tags": ["abstract"]  
}
```

Mark as sold (owner-only ribbon):

```
"sold": true
```

Owner mode code (change in src\App.jsx):

```
const OWNER_CODE = "universe and me are all aligned";
```
